

VICTOR CORREIA

ENGINEERING STUDENT AT ENSEA

SEEKING A 4-MONTH INTERNSHIP IN AEROSPACE | MAY - AUGUST 2027

I am a second-year engineering student at ENSEA, interested in embedded systems and aerospace. Curious, practical and persistent, I enjoy designing and testing electronic systems, from the first idea to a working prototype. My internship at Air France strengthened my interest in applying engineering to real technical needs. I am eager to contribute my practical mindset and technical skills to an aerospace engineering team.

LANGUAGES

- French: Native speaker
- English: Intermediate
- Spanish: Intermediate
- Portuguese: Beginner

SKILLS

Technical Skills

- Programming: C, Python
- Linux, Octave, Excel
- STM32, CAN, Arduino

Soft Skills

- Teamwork
- Problem-solving
- Adaptability

EDUCATION

- ENSEA – Graduate Engineering Program (Expected 2028)
Cergy, France
Focus: Electronics, Computer Science
- Pre-engineering undergraduate studies – Maths/Physics (2023–2025)
Lycée Blaise Pascal, Orsay, France
Majors in advanced mathematics and advanced physics
Minor in engineering sciences
- Baccalaureate with Honors (2023)
Lycée ORT, Villiers-le-Bel, France

PROJECTS & EXPERIENCE

2026 — Air France Industries | Electronics Intern

- Designed a prototype test device for an aircraft cargo Power Drive Unit, using CAN communication and an Arduino-based LCD interface.

2026–Present — Infrared Audio Transmission | Engineering Project

- Designing an infrared system to transmit and receive stereo audio.
- Working on the electronic circuits for FM modulation, infrared transmission and signal reception.

2025–2026 — Morse Code Transmitter | Embedded Systems Project

- Developed a Morse code encoder and decoder using an STM32 microcontroller.
- Designed a message format and added CRC error checking.

2024–2025 — Sand Flow Study | Scientific Project

- Studied the behaviour of granular sand through experiments and mathematical modelling.
- Analysed the results and presented the findings.
